Key Takeaways

GIRLS’ EDUCATION ROAD MAP
Prior to the COVID-19 pandemic, millions of young people, especially girls, were out of school. We faced a global learning crisis, with widespread illiteracy and innumeracy, even among those attending primary school.

The world has changed dramatically over the last year, deepening existing inequalities, and creating even more uncertainty about the way forward in global girls’ education. Against this backdrop of shrinking economies and growing needs, the question of how we will invest valuable resources is more pressing than ever.

While insufficient to meet the vast needs, billions of dollars are being invested in girls’ education advocacy and policy solutions around the world. At the same time, hundreds of millions are invested in research about what works in education. And yet, the policies and approaches that are pursued often don’t line up with what researchers find is effective.

The result is that governments, international organizations, and NGOs are too often investing scarce resources in policies or interventions without knowing whether they work. Researchers are too often testing interventions they find interesting, rather than asking whether the most common approaches in the field are delivering results. And donors and policymakers are left scratching their heads wondering where to invest.

That’s where the Road Map for Girls’ Education comes in. In a first-of-its-kind report, we reviewed thousands of studies and assessed hundreds of organizations working across dozens of countries to figure out who’s doing what, what’s working where, and what are the biggest needs facing girls.

**OUR GOALS ARE SIMPLE:** to make sure governments, NGOs, and donors are investing in what works and to make sure researchers are focusing on answering the most urgent and important questions for the field.
How can we better align needs, evidence, and practice in girls’ education?

**Needs**
What are the current needs in girls’ education?

**Evidence**
What works in girls’ education, and where?

**Practice**
What are organizations currently doing to improve girls’ education?
Investments that will make the biggest difference for girls’ education

The most effective interventions will depend on the particular challenges facing girls and their families in each setting. Understanding those challenges — and tailoring our responses effectively — will be key to success.

Programs that we know work when it comes to improving school enrollment and enhancing educational attainment for girls, and narrowing gender gaps:

- **MOST EFFECTIVE** Addressing the cost of schooling (e.g. through conditional cash transfers, scholarships, provision of school materials/uniforms)
- **MOST EFFECTIVE** Improving access to school (e.g. through construction, community schools, transportation, access to remote learning)
- **PROMISING** Providing proper sanitation facilities in schools, especially sex-specific toilets
- **PROMISING** Providing food in school or as take-home rations

Key recommendations for policymakers, NGOs, advocates, and donors

- **Focus efforts in the places and stages where there are still gender gaps in enrollment and completion.** Depending on location, this may be in primary completion, the transition to secondary, or secondary completion.
- **In the context of COVID-19, additional efforts are needed to address issues of cost (through reducing fees, providing materials), food insecurity (through school feeding), accessibility (through safely opening schools, expanding access to remote learning), and competing demands on girls’ time (through incentives to get girls back to school, flexible school hours).**
### Programs that we know work when it comes to improving learning for both girls and boys:

| MOST EFFECTIVE | Improving pedagogy, for example, structured pedagogy, and competency grouping. Computer/instructional technology can be useful in aiding improved pedagogy when linked closely with the curriculum. |
| PROMISING | Remedial education or tutoring for girls who are falling behind in school |
| PROMISING | Improving school governance/accountability |
| PROMISING | Ongoing teacher training or coaching |
| PROMISING | Merit-based scholarships |
| PROMISING | Teacher contracts |
| PROMISING | Providing food in school |

### Key recommendations for policymakers, NGOs, advocates, and donors

- **Shift resources to focus more on improving learning**, which is a near universal challenge, often faced by both girls and boys. A core goal of every girls’ education program should be to ensure that girls can read.
- **In the context of COVID-19, additional efforts are needed to address skill loss for children returning to school** (e.g. through competency grouping), and adapt effective pedagogical approaches to remote learning.

### Here are ways to better integrate evidence into common approaches to improving girls’ education:

1. **Plan trainings in gender-sensitive pedagogy to include training on improved pedagogy, and using competency grouping.**
2. **Combine efforts focused on building reading skills (using improved pedagogy) with content integrating messages on gender, rights and power.**
3. **Explore opportunities to add food provision into existing efforts to make schooling more affordable, which could help narrow gender gaps while also supporting children from the poorest households.**
4. **Partner with ongoing programs outside of the education space that focus on delaying marriage and childbearing and preventing violence against children and young people.**
Prioritize evaluation of common interventions, often developed in response to perceived needs on the ground.

Here are the most commonly used approaches in the girls’ education field that have not yet been shown to improve education outcomes:

- **Life skills education**, including content on gender, rights and power, empowerment training, sexual and reproductive health education, and provision of safe spaces and social connections.
- **Efforts to create more gender-sensitive school environments**, including through training in gender-responsive pedagogy and provision of academic support to girls.
- **Community engagement and efforts to increase support for girls’ education**.
- **Efforts to provide teaching materials and/or school supplies**.

**Key recommendations for policymakers, NGOs, advocates, and donors**

- **The most useful evaluations will be those that test multi-component programs** in a way that offers insights into which components, or combinations of components, are most effective and most cost-effective in which settings.
- **More research is needed in the settings where girls’ education needs are greatest**, including parts of West Africa, South Asia, and settings affected by conflicts and crises.
- **Adapt and extend evidence on what works to improve learning** (e.g., improved pedagogy) to understand whether and how these approaches work best for girls. At a minimum, this means reporting results of evaluations for girls and boys separately.
- **Develop a shared framework of gender-related barriers to education**. Include clear definitions of barriers, data sources to track progress, and guidance on which approaches address each barrier most effectively. Develop easy-to-use tools to guide program and policy design based on a diagnosis of barriers in each setting.
Right now, how can the entire global girls’ education community accelerate progress?

SEEK OPPORTUNITIES TO COLLABORATE MORE CLOSELY, and more regularly, with organizations playing different roles in this field. As the work of all actors continues to evolve rapidly, such collaborations will help better align needs, evidence and practice in global girls’ education.

BY SHIFTING OUR APPROACH AS A FIELD — linking our paths more closely together rather than moving forward on our own — we can address gaps among needs, evidence, and practice and accelerate progress.

The Evidence for Gender and Education Resource, or EGER, offers a platform and resource for the global girls’ education community to do just that. Visit EGER at egeresource.org and share your work.
The Evidence for Gender and Education Resource (TEGR) is the first freely available resource to help the global gender and education community make informed decisions about their programming, investments, and policy and research priorities. EGER is a searchable, easy-to-use, interactive database for practitioners, researchers, donors, and decision-makers to drive better education results for girls, boys, and communities around the world.
